**Cypripedium reginae** Walter

**Current Status**  Threatened

**Proposed Status (click for definitions)**  Endangered

**Proposed by:**  Pete Woods, Chris Tracey

PNHP/WPC

**Habitat**  Rich fens, cedar swamps, and rich calcareous swamps (NY Flora Atlas). Bogs, fens, and swampy woods (Rhoads and Block)

**Estimated number of extant occurrences**  (2) 2 – 15 (30)

**Estimated number of extant individuals**  (89) 89 – 300 (500) Ramets

**Factors that increase conservation concern**
Habitat is rare, small, vulnerable to invasives and succession. Plants vulnerable to deer browse.

vulnerable to collection

Factors negatively affecting populations are ongoing.

Most of the "extant" occurrences have not been found by recent surveys.

**Factors that decrease conservation concern**
Individuals may be missed if they are browsed by deer or are dormant.

habitat hard to locate; dormant populations could be missed.
POSCP STATUS CHANGE PROPOSAL FORM

(use TAB to move between fields)

SPECIES: Desmodium glabellum (Michx.) DC

SYNONYM:

PRESENT STATUS: TU PROPOSED STATUS: PE

TOTAL LOCATIONS, HISTORIC AND EXTANT:
(total number of documented occurrences in PA)

EXTANT LOCATIONS: 1
(number of occurrences thought to be currently extant)

ESTIMATED TOTAL EXTANT PLANTS IN PA: 25-50

HABITAT: Dry open hillsides, slopes, utility cuts, mixed graminoids and forbs, usually with other species of Desmodium, a habitat threatened by succession, development, overenthusiastic maintenance, and alien invasives.

RANGE: Primarily southern, but as far north as Michigan, New York, and Connecticut. DE Status - S1 (not listed in other states, possibly due to taxonomic confusion)

JUSTIFICATION: Only seen once in the field in PA in 25 years (2006, pipeline cut, Chester County, site possibly destroyed due to additional line emplacement). NOTE: Difficult to distinguish from its common relative D. perplexum (uncinate vs straight hairs).

SUBMITTED BY: Jack Holt and Janet Ebert

SPECIES: Desmodium laevigatum (Nutt.) DC
SYNONYM:

PRESENT STATUS: N PROPOSED STATUS: PE

TOTAL LOCATIONS, HISTORIC AND EXTANT: (total number of documented occurrences in PA)
EXTANT LOCATIONS: ? (number of occurrences thought to be currently extant)

ESTIMATED TOTAL EXTANT PLANTS IN PA: Unknown

HABITAT: Dry open hillsides, slopes, utility cuts, mixed graminoids and forbs, usually with other species of Desmodium, a habitat threatened by succession, development, overenthusiastic maintenance, and alien invasives.

RANGE: Primarily southern, but as far north as Illinois, Indiana, Pennsylvania, New York. Listed in DE (S3), MD (S3/ S4), NJ (S3), NY (SH)

JUSTIFICATION: Last seen in the field by the proposers in 2006 at a site since destroyed by expansion of an airfield runway. Unlike most other Desmodiums quite distinctive and showy, especially in flower, unlikely to be missed. Only seen 4-5 times in last 25 years.

**Desmodium nuttallii (Schindl.) B.G. Schub.**

**SYNONYM:**

**PRESENT STATUS:** TU  **PROPOSED STATUS:** PE

**TOTAL LOCATIONS, HISTORIC AND EXTANT:** (total number of documented occurrences in PA)

**EXTANT LOCATIONS:** 6  (number of occurrences thought to be currently extant)

**ESTIMATED TOTAL EXTANT PLANTS IN PA:** 500-1000

**HABITAT:** Dry open hillsides, slopes, utility cuts, mixed graminoids and forbs, usually with other species of Desmodium, a habitat threatened by succession, development, overenthusiastic maintenance, and alien invasives.

**RANGE:** Primarily southern, but as far north as New York, Connecticut, and Michigan. Listed in DE (S3), MD (SU), NJ (S3), NY (SH)

**JUSTIFICATION:** The most common of the 'rare' tick-trefoils, observed five times in last five years, one site had 100+ large and healthy plants. However most populations are small and in decline.

UXHFTN or W

**Proposed by:**  
Steve Grund  
WPC/PNPH

**Habitat**  
Mesotrophic to eutrophic, quiet waters, in temperate to subtropical regions with mild winters (Landolt in FNA)

**Estimated number of extant occurrences**  
( ) – ( )

**Estimated number of extant individuals**  
( ) – ( ) Genets

Collected twice, perhaps at the same site, 1907 and 1927. The "Neck" below Philadelphia, and Pennypack Park. Identification of both specimens was verified by Landolt.

This species has a strange distribution as mapped, no doubt at least in part due to failure to recognize the species, both in terms of taxonomy and identification. The FNA map suggests a coastal plain--up the Mississippi pattern. I assume that the states on the Kartesz map that show "present in state" but with no county records are based on Landolt in FNA. Note that this species was not recognized in Wherry et al, and thus Kartesz missed the Lemna obscura record from Philadelphia County.

Coe Finch Austin did a great job choosing an epithet...

**Sisyrinchium montanum** Greene

**Current Status**
N (special problems)

**Proposed Status (click for definitions)**
TU

**Proposed by:**
Steve Grund
WPC/PNHP

**Habitat**
Stream banks, woods and old fields (Rhoads and Klein); Moist meadows, stream banks, open woods (FNA for var. montanum); Moist, rocky crevices, moist meadows especially near coast and along Saint Lawrence Seaway (FNA for var. crebrum).

**Estimated number of extant occurrences**
() – ()
There are 33 dots in Rhoads and Klein

**Estimated number of extant individuals**
() – () Genets

**Factors that increase conservation concern**
Sisyrinchiums typically occur in small populations.

**Factors that decrease conservation concern**
Distinguishing between varieties, and between this species and *S. mucronatum*, may be difficult. Small populations may easily escape detection.

It is not clear which variety we have in Pennsylvania, and it may turn out that we have both var. crebrum and var. montanum. Both varieties have G-ranks of G5T4T5.
